

Work Site Therapy Services

Why Worksite Therapy?

ErgoScience Worksite Therapy services can save money on both treatment and travel costs. Bringing these services on site can also improve productivity, as well as employee morale and satisfaction. Transitional duty becomes more customized and meaningful. Intervention typically occurs much sooner and recurrence of problems decreases. All of these changes can translate into cost savings for your company.

What Types of Services Can Be Offered?

A variety of services can be offered through your worksite therapy clinic and can include acute physical therapy intervention, return to work testing, job demands analysis, work risk analysis, work conditioning, work simulation, work practices education, and post-offer screening. The advantage of ErgoScience work site therapy is that our clinicians know the work environment and tasks and can make meaningful recommendations for return to work or ergonomic interventions. Clinicians can interface effectively with other departments such as safety, industrial hygiene, ergonomics, and human resources, including workers' compensation managers.

How Can ErgoScience Help?

ErgoScience can help you by doing a "needs assessment" to determine the appropriate services, staffing, equipment, space, and supplies required to begin a Worksite Therapy program for your company. ErgoScience will help you achieve the correct balance to provide needed services without adding unnecessary costs. We can staff and supervise the employees and administer the program or help you hire your own staff. And, we can assist you with monitoring the outcome of the program.

How Do We Monitor Cost Effectiveness?

Monitoring the cost-effectiveness of your worksite rehab program is essential and is a very individualized process. ErgoScience will help you determine your cost savings as well as the improved quality of care for your employees.
